conservative [paper]
estimated $\hat{K}_u$
estimated $\hat{K}_u$ + calib.
conservative + calib.
target $\bar{G}$
pull-based
(a) load, $M = 400$
actual load G
target load $\bar{G}$
cons. + calib.: $G > 1$ for $\bar{G} \geq 0.5$
(b) MSE, $M = 400$
MSE $\bar{E}$
target load $\bar{G}$
(c) gain at best $\bar{G}$
reduction vs. conservative [%]
frame size M [REs]
MSE, est.
MSE, est. + calib.
Q_{95}, est. + calib.
MSE, pull-based
